

## Mineralisch isoliertes Heizkabel Typ VA

### Struktur

### Fertigkabel

**Spezifikation:**      **Mantelmaterial rostfrei 1.4541 (max. 700 ° C)**  
                              **Widerstandsdraht NiCr8020**  
                              **Mantelmaterial vom Kaltende - Kupfer /**  
                              **Nickel (max. 450 ° C) Stopfbuchsenmaterial -**  
                              **Messing**

**Test:**                      **korrekter Ausgang / Isolationswiderstand > 500 MOhm**  
                                    **bei 1000 VDC**
